

**NHDF-AD-CRYO**      **Cryopreserved human fibroblasts**  
**Cell Specification**  
 Lot 049-120410      Batch release: September 27, 2012

<p>Skin: Eyelid          Gender: female          Age: 58 years</p>	<p>Serology:          HIV1+2: negative          HAV, HBV, HCV: negative</p>
<p>Cryopreservation:          Passage 1 on: April 10, 2012          Number of cells per vial: <math>1.3 \times 10^6</math> cells</p>	<p>Thawing:          June 1, 2012          Viability after thawing: 94 %          Yield after thawing: <math>1.96 \times 10^6</math> cells          Culture in FGM Fibroblast Growth Medium          Number of Population Doublings: &gt; 20           Mycoplasma: negative</p>
<p>Phase contrast in passage 4 after thawing</p> 	<p>Fluorescence imaging in passage 2 after thawing:          Fibroblast specific surface antigen CD90 (green); nuclei (Hoechst 33342, blue)</p> 

Note: Yield, viability and population doublings are based on experiments performed at PRIMACYT using PRIMACYT's manual for thawing and culture of human fibroblasts.
