

**NHEK-JF-Cryo Cryopreserved human epidermal keratinocytes**

**Cell Specification**

Lot 060-131112

Batch release: October 26, 2017

<p>Skin: juvenile foreskin (baby) Gender: male</p>	<p>Serology: not available</p>
<p><b>Cryopreservation:</b> Passage 0 on: November 12, 2013 Number of cells per vial: <math>1.28 \times 10^6</math> cells</p>	<p><b>Thawing:</b> October 17, 2017 Viability after thawing: 82 % Yield after thawing: <math>1.12 \times 10^6</math> cells</p>
<div data-bbox="185 766 787 1360" data-label="Image">  </div> <p>Light Microscopy: day 10 after thawing</p>	

Note: Yield, viability and population doublings are based on experiments performed at PRIMACYT using PRIMACYT's manual for thawing and culture of human keratinocytes.
