

## CERTIFICATE OF ANALISYS

Lot#: CyHum19007-SC-P2-Z

### PRODUCT DESCRIPTION

**Reference:** HuSC**Product:** Cryopreserved Human Stellate Cells**Cellular passage:** P2**Size/Quantity:** > 100.000 cells/vial**Isolation date:** 5<sup>th</sup> September 2019**Storage conditions:** -196°C using LN<sub>2</sub>**Sterility test:** negative for bacteria, yeast, and fungi

### DONOR DEMOGRAPHICS

| Species   | Gender | Race  | Age | BMI   | Smoker | Alcohol Use | Drug Use |
|-----------|--------|---|-----|-------|--------|-------------|----------|
| Human     | Male   | Caucasian   | 29  | 21.11 | No     | No          | No       |
| Pathology |        | Serological Data <sup>1</sup>                     |     |       |        |             |          |
| Sarcoma   |        | Tested negative less than 3 months before surgery |     |       |        |             |          |

Patient informed consent was obtained. <sup>1</sup>The donor was serologically tested negative for following infectious diseases: HIV, Hepatitis B, and Hepatitis C. Donor medical history was also examined prior to accepting this donor. *For donor's medication information, please contact us.*

### CHARACTERIZATION FOR HUMAN STELLATE CELLS

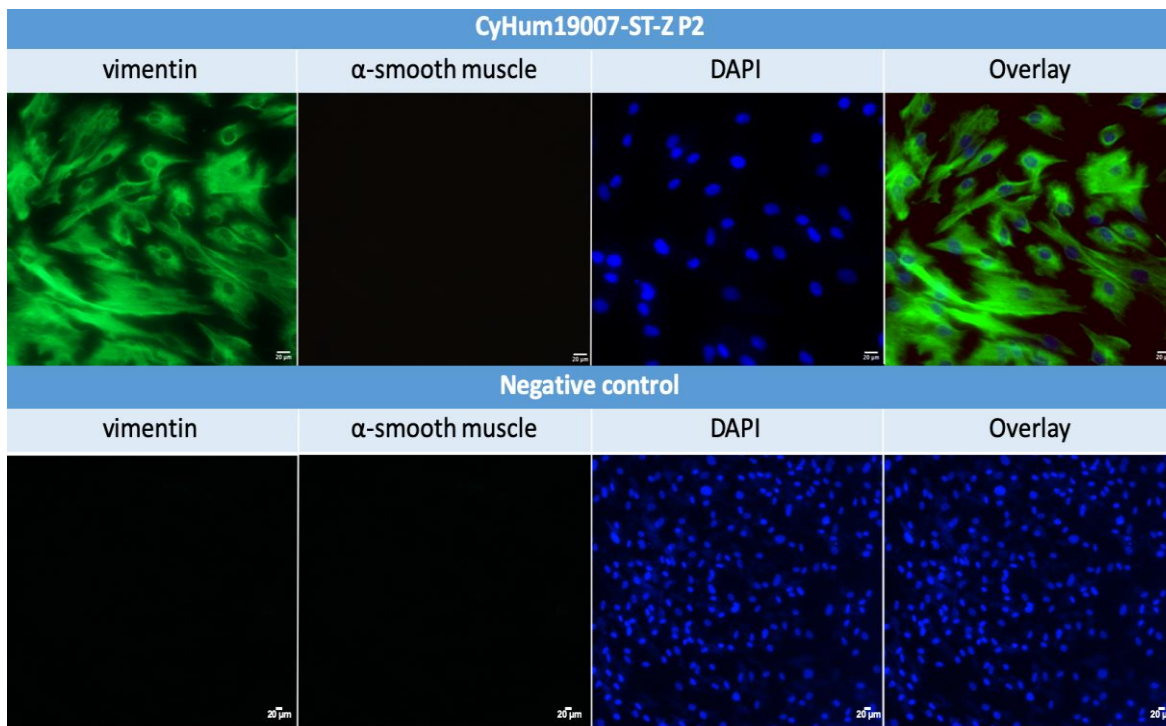

| Post Thaw Lot information  |             |
|--|-------------|
| <b>Number of viable cells/vial:</b>  | > 100.000   |
| <b>Cell seeding density (cells/cm<sup>2</sup>):</b>                                  | 5.000-8.000 |
| Cell morphology  |             |
|  |             |

Human stellate cells were thawed and seeded according to BeCYtes Biotechnologies protocol. The number of cells and viability post-thawing was assessed by using the trypan blue exclusion assay. Phase-contrast image 4 days after seeding is shown on the panel.

**For basic research use only**, not to be used for clinical or diagnostic applications. Products distributed by BeCYtes Biotechnologies may contain human material that should be treated as potentially biohazardous.

### IMMUNOFLUORESCENCE ANALYSIS

Human stellate cells are positive for vimentin and negative for  $\alpha$ -smooth muscle actin when they are quiescent. When they become activated, they start to express  $\alpha$ -smooth muscle actin.

Cells were cultured on 8 well chamber slide till reach the confluence. The first panel shows green immunofluorescence for vimentin which is evident in the cell body and cytoplasmic processes in the cultured stellate cells. Red immunofluorescence for  $\alpha$ -smooth muscle actin is negative. Blue immunofluorescence for DAPI shows the cellular nuclei. Negative controls are showed on the bottom of the panel with all the markers used for the SC.

**If you need help for an experiment, just contact us, our experts will be pleased to assist you**

#### CERTIFICATION:

*The viability and performance of the human stellate cells provided depend primarily on the use of appropriate media and reagents, as well as the use of sterile plastics. Likewise, proper handling protocols must be followed. Please note that if these parameters are not carefully considered, the cellular response obtained in the assays may be lower than expected.*

| Name                   | Title           | Signature   | Cytes Biotechnologies, S.L.   | Date     |
