

Updated on: 11<sup>st</sup> December 2023

# **CERTIFICATE OF ANALYSIS**

Lot#: CyHum19008-HE-C

# **PRODUCT DESCRIPTION**

Reference: HuHECPMI/6+ Product: Cryopreserved Human Hepatocytes Category: Plateable, Cytochrome P450 inducible Spheroid qualified: NO (see details below: 3D Spheroid formation section) Isolation date: 21<sup>st</sup> November 2019 Initial Isolation Viability: 81.70% Storage conditions: -196°C using LN<sub>2</sub> Sterility test: negative for mycoplasma, bacteria yeast & fungi

# **DONOR DEMOGRAPHICS**

Species	Gender	Race	Age	BMI	Smoker	Alcohol Use	Drug Use
Human	Male	Caucasian	72	36.51	No	Occasional	No
P	athology				Serological I	Data <sup>1</sup>	
L	iver mass			Tested nega	itive less than 3 m	onths before surge	ry

Patient informed consent was obtained. <sup>1</sup>The donor was serologically tested negative for following infectious diseases: HIV, Hepatitis B and C. Donor medical history was also examined prior to accepting this donor. *For donor's medication information, please contact us.* 

### **CHARACTERIZATION FOR PLATEABLE CELLS**

Post Thaw Lot information	Result	SD	
Number of viable cells (cells/vial):	6.74x10 <sup>6</sup>	± 1.27x10 <sup>6</sup>	5
Post-thaw viability (%):	89.8	± 4.83	5
Days in culture after thaw (24w):	4	± 0.00	1
Days in culture after thaw (96w):	3	± 0.00	1
MONOLAYER ASSESSMENT <sup>2</sup> Plateable:	YES Conflu	<b>ience:</b> 92.5%	
Seeding density in 24 well recommended:	2.12x	10 <sup>5</sup> cells/cm <sup>2</sup>	
Seeding density in 96 well recommended:	2.81x	10 <sup>5</sup> cells/cm <sup>2</sup>	
Cell morphology 24h		Cell morphology	96h

Human hepatocytes were thawed and seeded according to BeCytes Biotechnologies culture protocol. The yield and viability were determined by a trypan blue exclusion assay after the thawing process. <sup>2</sup>Resuspended human hepatocytes from post-thaw assessment were plated in collagen-coated 24-well plates in hepatocyte plating medium. Cells were refreshed with hepatocytes maintenance medium during the first change of medium on the day of thawing. Maintenance medium was replaced in the culture every day. If images from the 96-well plates are needed, please contact us.

For basic research use only, not to be used for clinical or diagnostic applications. Products distributed by BeCytes Biotechnologies may contain human material that should be treated as potentially biohazardous.

### **CYTES BIOTECHNOLOGIES, SL.**

# **3D SPHEROID FORMATION**

### Spheroid morphology

BeCytes **does not guarantee** that these primary hepatocytes will be suitable for 3D culture and creation of spheroid structures while using BeCytes protocols.

# **INDUCTION FOR PLATEABLE CELLS**

#### PHASE I: CYP ACTIVITIES EXPRESSED IN pmol/min/mg protein (mean ± SD)

		Induction (Specific Activity)		
Enzyme	Basal Activity on day 1	Basal Activity on day 4	Induced Activity on day 4	n-Fold induction
CYP1A2	24.28 ± 1.03	0.53 ± 0.06	41.00 ± 6.01	77.55
CYP2B6	$15.00 \pm 0.32$	$0.51 \pm 0.04$	10.64 ± 3.61	21.02
CYP3A4	7.92 ± 0.03	1.72 ± 0.09	18.61 ± 2.53	10.83

Cryopreserved human hepatocytes were thawed and plated in 24well collagen I coated plates. Cells were overlaid with Matrigel<sup>®</sup> (Corning) in Human Hepatocyte Maintenance Medium at first medium change at day of thawing. Treatment (n=2 per compound) with vehicle control [0.15% (v/v) DMSO] or inducers (Rifampicin,  $\beta$ -Naphthoflavone and Phenobarbital) began 1-day post-plating and continued for 72 hours. At the end of induction, monolayers were rinsed with PBS and incubated with probe substrate solutions in culture media. See Table 1 for information on each probe substrate. Metabolites were quantified by LC-MS and normalized to protein content. The fold induction was calculated by dividing the induced activity by the vehicle basal activity on the same day in culture.

#### PHASE I: CYP450 mRNA induction

CYP (mRNA)	n-Fold Induction
CYP1A2	95
CYP2B6	3
CYP3A4	6

Cryopreserved human hepatocytes were thawed, plated in 24well collagen I coated plates in Hepatocyte Plating Medium. Cells were overlaid with Matrigel<sup>®</sup> (Corning) in Human Hepatocyte Maintenance Medium at first medium change at day of thawing. Maintenance medium was replaced in the cultures daily. Treatment (n=2 per compound) with vehicle control [0.15% (v/v) DMSO] or inducers (Rifampicin,  $\beta$ -Naphthoflavone and Phenobarbital) began 1-day postplating and continued for 72 hours. At the end of the treatment period, RNA was isolated for mRNA analysis.

#### Table 1. Substrates Phase I

Enzyme	Probe Substrate	Concentration (µM)	Incubation Time (min)	Metabolite
CYP1A2	Phenacetin	100	30	Acetaminophen
CYP2B6	Bupropion	500	30	Hydroxybupropion
CYP3A4	Midazolam	30	30	1-Hydroxymidazolam

#### PHASE II: UGTs & SULT ACTIVITIES 24h AFTER SEEDING EXPRESSED IN pmol/min/mg PROTEIN (mean ± SD)

Enzyme	Conjugate	pmol/min/mg
UGT	7-OH coumarin glucuronide	323.34 ± 50.80
SULT	7-OH coumarin sulfate	63.44 ± 14.01

Cryopreserved human hepatocytes were thawed, plated in 24well collagen I coated plates in Hepatocyte Plating Medium. Cells were overlaid with Matrigel® (Corning) in Human Hepatocyte Maintenance Medium at first medium change at day of thawing. On day 1, hepatocytes were incubated with 7-Hydroxycoumarin to assay for UDP-Glucuronosyltransferase (UGT) and Sulfotransferase (SULT) activities. See Table 2 for information on each probe substrate. Metabolites were quantified by LC-MS and normalized to protein content.

#### If you need help for an experiment, just contact us, our experts will be pleased to assist you.

For basic research use only, not to be used for clinical or diagnostic applications. Products distributed by BeCytes Biotechnologies may contain human material that should be treated as potentially biohazardous.

### **CERTIFICATION:**

The viability and performance of the primary human hepatocytes provided depend primarily on the use of appropriate media and reagents, as well as the use of sterile plastics. Likewise, proper handling protocols must be followed. Please note that if these parameters are not carefully considered, the cellular response obtained in the assays may be lower than expected.
