Note: Activity assays were performed at PRIMACYT GmbH. The assays were conducted at 1 mg/mL protein in 0.1 M Phosphate buffer at 14 °C for 15 min (phase I) and 30 min (phase II). Values are expressed as mean ± SD of 2 separate experiments.

Note: SDS-PAGE was performed at PRIMACYT GmbH using a 7 % stacking gel and a 10 % separating gel with 10, 20 and 40 µg protein as indicated. Pageruler Prestained Protein Ladder by Thermo Scientific was used as marker. Protein sizes (kDa) denoted on the left.
